

KÜÜL® PADS

BLACK DIAMOND EDGE COATING INCREASES LONGEVITY OF KÜÜL® PADS

KÜÜL® pads are your best choice for evaporative cooling pads because they are manufactured from the heaviest weight kraft paper and the highest resin content. Even though KÜÜL® pads are strong and durable, some applications require greater protection. Port-A-Cool, LLC now offers Black Diamond Edge Coating for KÜÜL® pads to meet that requirement.

FEATURES OF BLACK DIAMOND EDGE COATING:

Weatherproof - Black Diamond Edge Coating for KÜÜL® pads is tough and durable for demanding agricultural applications.

Pad Durability - KÜÜL® pads are manufactured to be the strongest pads on the market but consistent direct sunlight and constant water saturation can lead to mineral and scale build-up. Black Diamond Edge Coating can reduce or even eliminate this build-up and extend the life of pads in certain applications.

Pad Maintenance - KÜÜL® pads, with the extra protection of Black Diamond Edge Coating, can be cleaned more vigorously and, as a result, will further resist mineral and algae build-up and accelerated decay.

Pad Efficiency - Black Diamond Edge Coating is evenly applied to the pad and does not restrict water or airflow. While increasing rigidity and durability, Black Diamond Edge Coating allows for the most efficient and effective cooling for a wide variety of applications.
